

# RENOMATIC SECTIONAL GARAGE DOOR AND OPERATOR

HÖRMANN

# Responsibility for generations

The Hörmann family business has over 90 years of experience as a construction component specialist. This gives us an obligation to both current and future generations. That's why environmental responsibility plays such an important role for us. To this end, we develop products and processes that conserve resources and reduce emissions.

## “A GOOD REPUTATION MUST BE EARNED.”

August Hörmann

In keeping with the tradition started by the company’s founder, the Hörmann brand is a true promise of quality and, with sales of over 20 million doors, door frames and operators, is one of Europe’s most successful suppliers. Due to the comprehensive international sales and service network, Hörmann is your strong partner for high-quality construction components.

**REDUCING EMISSIONS, CONSERVING RESOURCES.** As a family business, we are very conscious of our responsibility to future generations. Hörmann’s sustainability strategy aims to reduce and avoid greenhouse gas emissions. To ensure we have a valid data set, we calculate our company’s carbon footprint every year. We meet 100% of our electrical power needs at all our European production sites using green electricity sourced from renewable sources. Through a range of measures, we are reducing our emissions and thereby saving more than 75000 tonnes of $CO_2$ each year. In addition, we provide support for climate protection projects and thereby perform $CO_2$ offsetting. Currently, for example, we offset more than 550000 tonnes of $CO_2$ per year. This corresponds to the emissions generated by the procurement, production and distribution of Hörmann products for residential construction. We offer our customers the opportunity to play an active part: if they wish, when buying our products for commercial and industrial construction, they can also make a contribution to climate protection projects.

5. Anthracite grey CH 7016 Matt deluxe
6. Black CH 905 Matt deluxe
7. Terra brown CH 8028 Matt deluxe

# Sectional garage door RenoMatic

Equipment, sizes and additional packages

### Good thermal insulation

The RenoMatic sectional garage door is double-skinned and insulated. The door travel is pleasantly quiet thanks to the 42 mm thick sections. The sections have a polyester-primer coating 1.

The torsion spring assembly with the patented spring-in-spring system or the torsion spring with tested spring safety device protects the door leaf against falling. Thanks to the good thermal insulation, the doors are an excellent choice if your garage is directly attached to the house or if there is access from the garage to the house.

### Optimum long-term protection 2

A non-brittle, 4 cm plastic frame shoe offers long-term protection against corrosion of your door, even with waterlogging, which is unmatched by competitor solutions. The frame shoe completely covers the frame in the area susceptible to rust. Only this offers true long-term protection.

**Only from Hörmann**

- Plastic frame shoe

### Matching appearance

The harmonious overall impression of a door is created by many little details. For example, we always supply doors with Woodgrain or Planar surface finish with the fascia panel 3 matching the door surface and colour.

The side frames 4 are always in a Woodgrain surface finish, coated in Traffic white RAL 9016. Optional frame coverings are available in the surface finish of the door.

### Matching side doors 5

You can also select matching side doors with narrow aluminium profiles to go with the sectional garage door RenoMatic. The door infills are perfectly matched to the door style as well as the surface and colour. This results in a harmonious overall appearance for the door and side door.

## 36 door sizes
## for almost any opening

**Now with Secured by Design as Standard**

Apart from doors and windows, burglars often try to break in through the garage door to enter the house via a connecting door or to steal items from the garage. Now, as with all insulated sectional garage doors, RenoMatic comes with Secured by Design as standard [1]. You won't find a more secure sectional garage door on the market. Speak to your Hörmann distributor and get your door registered today!

Secured by Design

SBD

Official Police Security Initiative

[1] This applies to all insulated sectional doors that are registered at Hörmann UK and are unmodified, fitted behind the opening and are combined with a Hörmann operator. The accreditation is for doors that have been fitted after 01.05.2021 only.

# Sectional garage door RenoMatic

Standard ProMatic operator

### Automatic comfort

The RenoMatic comes with the operator ProMatic 1 and two 4-button hand transmitters HSE 4 BS 2. The patented, rail-mounted operator technology ensures smooth and quiet door travel. On encountering an obstruction, the reliable automatic safety cut-out stops the door.

### BiSecur radio system with certified security

The bi-directional BiSecur radio system is based on future-oriented technology for the convenient and secure operation of garage and entrance gate operators, door operators, lights and more. This extremely secure BiSecur encryption protocol, developed by Hörmann, with a stable, interference-free range makes sure that no one can copy your radio signal. It has been tested and certified by independent security experts.

### Safe operation

Hörmann sectional doors are tested and certified in accordance with the high safety requirements of European standard 13241 3, not only on their own but also in combination with Hörmann operators. It would be hard to find a safer sectional door.
